

SunWize™ Portable Energy System

The SunWize™ Portable Energy System is a solar charging system specifically designed to power laptop computers and can also operate or charge virtually any battery-operated portable device. The Unique System provides timeless reliability by tapping into natural sunlight.

As the number of traveling professionals increases worldwide, the need for a reliable, portable power supply grows. In locations with limited access to utility-supplied power or where brown outs are common, the SunWize™ Portable Energy System provides the perfect power solution. Engineered with state-of-the-art solar technology, this system is efficient and dependable to keep your electronics up and running.

SunWize Technologies, Inc., a world-class solar energy technology company, has perfected a unique manufacturing process to encapsulate high-performance solar cells in a polymer plastic. These same solar cells are currently used to power space satellites and other highly advanced electronic systems.

Features

- Lightweight and portable
- Durable and weather-resistant
- Maintenance free – no moving parts
- Nine watts of power in full sun
- Environmentally friendly
- Renewable energy source
- Totally automatic
- 3, 6, 7.5, 9, 12 volt auxiliary output

Ideal for . . .

- **Laptop Computers**
- **Cellular Phones**
- **GPS Units**
- **CD Players & Radios**
- **Video Cameras**
- **Two-way Radios**
- **Medical & Environmental Equipment**
- **Other products with rechargeable batteries**

Our proprietary process results in solar panels that are lightweight, weather-resistant and highly durable.

Here's How It Works

The SunWize™ Portable Energy System converts sunlight directly into electricity allowing you the freedom to operate or recharge your laptop computer anywhere the sun shines. Used in direct or indirect sunlight, the system's power output is able to double the run time of a laptop computer while in operation. A proprietary meter allows you to adjust the panel's position with respect to the sun for maximum power output.

To meet individual travelling needs. The SunWize™ Portable Energy System is available in an assortment of carrying cases. Please see back cover for detailed information on available models. Let the SunWize™ Portable Energy System be your solution for reliable, portable power anywhere the sun shines!

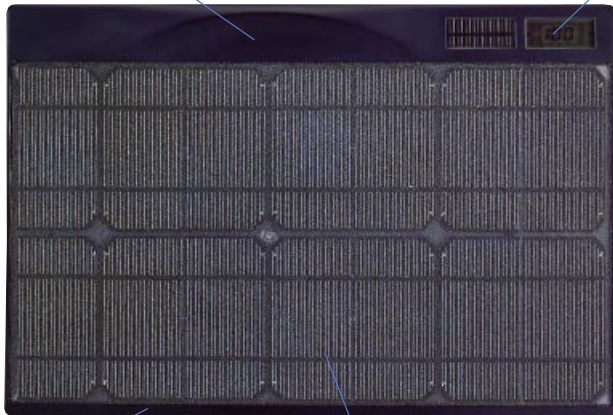

SunWize™ Portable Energy System is manufactured by SunWize Technologies, Inc., worldwide leaders in photovoltaic power generation solutions.

SunWize™ Portable Energy System

Easy Grip

Ergonomically designed for ease of handling.

OPTI-Meter

Each system is equipped with the SunWize™ OPTI-Meter*, and LCD metering system that responds to light intensity. This feature allows you to optimize the performance of the system by positioning the module to achieve the highest output.

Polymer Encapsulation

Solar cells are sealed in an impermeable polymer for durability.

Single Crystal Solar Cells

Converts solar energy into electricity.

Convenient Cord Storage

10' flexible power extension cord stores on easy wind spool.

Stand

Uses laptop computer hinge technology for continuous adjustment angle.

Multi-Volt Controller

Engineered specifically for this product, the controller regulates power flow between the SunWize™ Portable Energy System and the computer while providing proper voltage. It features multiple output voltage ports with different plug options, one dedicated for laptop computers and one plug for almost all other portable electronic items. The Multi-Volt Controller is designed to operate with up to two SunWize™ Portable Energy Systems to deliver double the power.

The SunWize™ Portable Energy System is available in an expanding assortment of carrying cases as follows:

- **Traveler** - carrying case with two panel pockets.
- **Laptop Traveler** - carrying case with two panel pockets and one computer pocket.
- **Overnighter** - carrying case with two panel pockets, one computer pocket, and an extra pocket for files or accessories.

Distributed By:

The SunWize™ Portable Energy System with optional panel:

As an option an additional solar panel can be added that will allow you to run a laptop, and at the same time, recharge the battery under full sun conditions.
